DETAILED ACTION***Claim Rejections - 35 USC § 112***

Claims 16-28 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Claim 16 as amended states that a "thickness of the notched spacer alongside the gate electrode is thinner near the substrate." As support for the amendment, Applicant's remarks refer to a sentence in paragraph [0025], which states that a portion of the first dielectric layer 126 may remain on the side of the gate electrode 122. This sentence does not say anything at all about the thickness of the portion of the dielectric layer that remains, and certainly does not teach that the thickness of the spacer is thinner near the substrate.

Claim 24 as amended states that the etching process removes "at least a portion of the first layer along the surface of the substrate." There appears to be no support in the specification for removing "a portion" of the first layer along the substrate. The figures and discussion of the figures teach to remove *all* of the first layer that lies along the substrate. Compare figure 1d and 1e, for example.

Applicant's remarks have been considered, but are not convincing. As noted above, the paragraph relied upon for support for the amendment to claim 16, for

example, says that a portion of the first dielectric layer 126 "may remain," but there does not seem to be any teaching about that portion being "thinner near the substrate" as required by the claim language.
